

EV charging facilities at Metro stations should be lauded

In reference to the report 'EV charging facilities now at Metro stations' on the issue dated August 6. In order to promote electric vehicle mobility in the city, Chennai Metro Rail Limited has joined hands with Energy Efficiency Services Limited, a Union Government enterprise, to launch an electric vehicle charger facility at Nandanam Metro station. This initiative has to be lauded. We should do all in our capacity to promote the use of electric vehicles. Besides improving air quality and reducing climate change, the use of such vehicles can reduce the cost of fuel and maintenance. We have a responsibility to save the earth for the future generation. Let us encourage all government moves towards this and make the earth a better place.
